You Must Follow and Understand these Instruction

1. Important Notice

It is the responsibility of the purchaser to follow all instruction and or guidelines and safety precautions detailed in the kit instructions and other manufactures products used with and within this kit. It is your responsibility to determine the compatibility of this part or devices in this part with the vehicle and other components.

SpencerCycle.com assumes no responsibility or liability for damages incurred from the use of products or parts of products sold or manufactured by SpencerCycle.com on motor vehicles used for or in competition racing events. SpencerCycle.com does not recommend or approve of products or use of products manufactured by SpencerCycle.com or sold by SpencerCycle.com to be used on motor vehicles on which are or may be operated on public highways or roads, and SpencerCycle.com assumes absolutely no responsibility for damages arising or incurred from such use. Spencercycle.com does not promote or intend its products, manufactured or sold by SpencerCycle.com to be use for illegal street racing. It is the purchasers responsibility to check and abide by all state and local laws pertaining to the use and transportation of nitrous oxide and the actual use of cryogenic gases.

2. Installation

The picture above is how your bracket kit will look when installed. It is basically a simple unbolt and bolt up process. You will need to remove the stock left side foot peg bracket from the bike and then remove the foot peg bolt that holds the foot peg to the bracket. Now you will match the shifter bracket up to the stock foot peg bracket align the foot peg back in the hole and use the supplied extra long silver bolt and washer in the kit. We recommend you use a small amount of red thread locker to prevent the bolt from coming loose. Now reinstall the bracket on the bike frame using the supplied black extra long 8mm bolts. Next you will want to your air shifter cylinder on the bracket, to do so install the 2 inch long 6mm black bolt through the back of the bracket and install one nylon insert lock nut on the bolt. This will connect the bolt and bracket together as one. Now install your cylinder and use the other nylon insert lock nut and tighten the

“SureShift” Air Shifter Bracket Kit

nut up making sure that you **STILL HAVE A SMALL AMOUNT OF PLAY** with the cylinder. You **DO NOT** want the cylinder to be bolted solid with the bracket. Now you are ready to install the shift shaft actuator. Install the unit on the shift rod loosely,(make sure the bolt heads are facing towards you--the picture show a prototype only) next attach your cylinder shaft and measure the distance between the end of the collet (the nut on the shaft) and the end of the cylinder where the shaft starts to go in the cylinder. this measurement needs to be 7/8 to 1inch of shaft travel. You are now done attach your air line and go have fun. The installation picture is meant to be used a reference only.

3. Warranty

SpencerCycle.com warrants to the original purchaser that the components shall be free from defects in parts and workmanship under normal use for 90 days from date of purchase. This warranty is limited to the repair or replacement of any component found to be defective when returned to SpencerCycle.com.
